

# TEP Summer Schools 2002

**2002 is the fifth year TEP Technology Pupils Summer Schools have been enthusiastically attended and successfully run across England and Wales.**

Each year challenging, quality projects are devised requiring two full days to design, make and test by the pupils. Tutors are recruited to provide plenty of individual help. They include sixth form students, trainee teachers, neighbourhood engineers and D&T teachers.

All are provided with a one-day training

session, and they take the projects back to their schools. Local organisers and sponsors provide the venue and staff and range across Education Business Partnerships, local schools, LEA's, EAZ's.

Resource costs are subsidised by TEP. Technology Activity Days can be run at any time through the year.
